Once logged in to Animoto, click “Create Video” at the top of the page. This will bring you to the style selection for your video. Click on the style you want.

Once you’ve chosen a style, you may be offered a Video Tutorial. You can choose to watch it or skip it.

When you’re ready to begin, click “Add Pics & Vids” in the left column. Click “Upload” to upload pictures and video off of your hard drive.

To add music, click “Change Music” in the left column. You can choose from the library of songs offered by the website, or you can upload your own.
To choose a song from the library, highlight the song and click “Add Song.”

Once you’ve finished adding pictures and music, click the green “Produce Video” button.

You will be shown a temporary screen letting you know that the video is being put together. You can wait on that screen or, if you choose to leave the page, Animoto will email you when the video is ready.

Once you open your uploaded video, click on the “Sharing” menu and click on “Copy Link.”

A new window will open. Click “Copy Link” to copy it to the clipboard. You can then paste the link into a myCourses dropbox or share the video with others.
